

# alkaWAND™

alkaline water energizer

Water-Revolution’s alkaWAND™: Your “On-the-go” alkaline, energized water solution!

There are times when you simply do not have the great water you have become accustomed to drinking available to you – and you buy bottled water. The alkaWAND™ is a convenient way to take bottled water and turn it into delicious alkaline, energized water.

Place an activated alkaWAND™ in a bottle of purified water. Shake for 30 seconds. Wait 5-10 minutes before drinking. Why wait? Because the health-promoting qualities are on the rise! The alkaWAND’s very specialized and exacting ceramic materials greatly intensify the pH (up to 9.5pH) and increase the antioxidant potential (ORP) value (up to 450 mV range), creating delicious hydrating, micro-clustered water.

How long will my alkaWAND™ last? The life of your alkaWAND™ is dependent on a couple factors: the kind of water you are using it in and how often you use it. On average, an alkaWAND™ will last up to 4 months, treating two 16-oz. bottles per day.

Is there a maximum amount of time the alkaWAND™ should be inserted in the bottle? Let’s face it: Bottled water is not fresh. It’s best to drink your alkaline, energized water as soon as possible. Exposure to light, oxygen and heat diminish the enhanced properties.

Ingredients: Proprietary blend of the finest quality energy-infused ceramic and other materials including antibacterial, far-infrared, potassium, magnesium, tourmaline, zeolite, and calcium. The alkaWAND™ body is made of stainless steel.

The alkaWAND™ is intended for use with water only. When drinking bottled water, we recommend purified water.
